

Useable both pneumatic and hydraulic

HYDRAULIC CYLINDER

High thrust can be obtained by pneumatic circuit in combination with Pneumatic Booster or Rush Booster.

HIROTAKA MFG. CO.,LTD.

Hydraulic cylinder

For air-hydro booster
Tie-rod type hydraulic cylinder

A hydraulic cylinder that can be used for both hydraulic and pneumatic pressure.

- It can operate from hydraulic pressure equivalent to pneumatic pressure since it is a hydraulic cylinder designed to be used for both hydraulic and pneumatic pressure.
- By using it in combination with our products “Pneumatic Booster” and “Rush Booster”, it is possible to obtain thrust equivalent to hydraulic pressure by pneumatic circuit.

Specifucation

Nominal pressure	14MPa・21MPa
Maximum allowable pressure (Note)	Nominal pressure 14MPa : Head side 17.7MPa, Rod side 17.7MPa (B Rod) 13.7MPa (C Rod) 21MPa : Head side 26.5MPa, Rod side 24.5MPa
Piston speed	10~300mm/sec (Excluding cushion stroke)
Fluid temperature	-10~60°C
Fluid	Hydraulic fluid or Air
Minimum operating pressure	0.15MPa or less (Bore size $\phi 32$ only 0.2 MPa or less.)
With auto switch type (mm)	$\phi 32 \sim \phi 125$ (Nominal pressure 21MPa : $\phi 40 \sim \phi 80$)

Note) Maximum allowable pressure means the maximum pressure generated in the cylinder that the cylinder can withstand (surge pressure etc.).

Note) In the case of usage that raises the load with air pressure, consider reducing the load weight or securing air pressure so that it is 50% or less of the theoretical output value on the pulling side in order to obtain stable operation and speed.

Symbol	Nominal pressure
Nil	14 MPa
21	21 MPa

Symbol	Type of Rod
Nil	B Rod
L	C Rod

Nominal pressure 21 MPa is B Rod only

Stroke limitation of standard products

Nominal pressure	Bore size (mm)	32	40-50	63-80	100-160	180-250
14 MPa	Maximum stroke (mm)	1200	1500	1600	2000	2000
21 MPa		—	1500	1600	2000	1500

Positions of Port, Cushion valve and Air release valve

Viewing each dimension from the rod end of the cylinder, the port position symbol "Nil" is the position shown in the figure below (A).

At that time, the cushion valve position is (B), and the air release valve position is (D). (Position: (A)(B)(D))

Other positions are (B)(C)(D), (C)(B)(D), and (D)(A)(B) on the port position.

Standard position (With cushion valve)

(A) • • • Port

(B) • • • Cushion valve

(D) • • • Air release valve

Lock nut

One lock nut is included with all models. Double rod type also is included with one lock nut.

Bore size (mm)	Standard strokes (mm)
20, 25	5, 10, 15, 20, 25, 30, 35, 40, 45, 50
32	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 75
40, 50, 63, 80, 100	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 75, 100

※ Overall length of intermediate strokes.

55, 60, 65 and 70 mm stroke cylinders have the same overall length as a 75 mm stroke cylinder. (Bore size 32 to 100 mm)

80, 85, 90 and 95 mm stroke cylinders have the same overall length as a 100 mm stroke cylinder. (Bore size 40 to 100 mm)

◀ Applicable auto switches ▶

Table 2

Bore size (mm)	Read auto switch		Solid state auto switch	
	Model	Load voltage	Model	Load voltage
20, 25	DA93	DC24V, AC100V	DM9B	DC24V
32, 40, 50, 63, 80, 100	DZ73		DY59B	

Specification

Action	Double acting / Single rod type
Fluid	Hydraulic fluid or air
Nominal pressure	16 MPa
Proof pressure	24 MPa
Minimum operating pressure	0.15 MPa (φ 20, 25, 32 : 0.2 MPa or less)
Ambient and fluid temperature	Without auto switch : -10 to 80°C With auto switch : -10 to 60°C
Piston speed	8 to 100mm/sec
Cushion	None
Rod end thread	Female thread, Male thread
Stroke length tolerance	0 +0.8mm
Mounting type	Basic type
Mounting method	Through hole

Note) Since SHC series does not have an air release valve, release air from piping, etc.

Auto Switch

Applicable cylinder: Tie-rod type hydraulic cylinder (THCW series)

Read auto switch		
Model No.	RS-6	
Voltage	24 VDC	100 V / 200 VAC
Maximum switching current	20 mA	20 mA
Maximum switching capacity	5 W	5 VA
Average operating time	1 mSEC	
Insulation resistance	100 MΩ or more (500 VDC measured via megger)	
Impact resistance	30 G	
Working temperature range	-10 to 60 °C (freezing not allowed)	
Lead wire	Two - core cable, 1 m	
Indicating lamp	Red LED illuminates when turned ON	

Read auto switch

Solid state auto switch	
Model No.	H2ME
Output type	NPN
Voltage	5, 12, 24 VDC
Maximum load current	5 mA (5 VDC), 10 mA (12 VDC), 20 mA (24 VDC)
Maximum switching current	100 mA (5 VDC), 200 mA (24 VDC)
Internal voltage drop	0.6 V or less (24 VDC)
Maximum leakage current	0.1 mA or less (24 VDC)
Impact resistance	30 G
Working temperature range	-10 to 60 °C (freezing not allowed)
Lead wire	Three - core cable, 1 m
Indicating lamp	Red LED illuminates when turned ON

Solid state auto switch

About mounting compatibility: Read auto switch (RS- 6) and Solid state auto switch (H2ME) can use the same switch bracket.

Applicable cylinder: Compact type hydraulic cylinder (SHC series)

	Read auto switch		Solid state auto switch	
Model No.	DA93	DZ73	DM9B	DY59B
Indicating lamp	Red LED illuminates when turned ON			
Lead wire	Two - core cable, 0.5 m			
Applicable load	Relay, PLC		24 VDC Relay, PLC	
Load voltage	24 VDC, 100 VAC		24 VDC	
Max. load current and load current range	24 VDC: 5 to 40 mA 100 VAC: 5 to 20 mA		2.5 to 40 mA	5 to 40 mA
Internal voltage drop	2.7 V or less	2.4 V or less	4 V or less	
Leakage current	—		0.8 mA or less	
Contact protection current	None		—	

Safety precautions

1. Refer to the bucking table and use below the maximum load so that bucking does not occur in the piston rod.
2. Mounting
 - (1) Be certain to align the axis center of the piston with the load and direction of movement when connecting.
 - (2) When an external guide is used, connect the piston rod end and the load in such a way that there is no interference.
 - (3) Do not scratch or gouge the cylinder tube, piston rod by striking them with other objects.
 - (4) Do not use until you confirm that the equipment can operate properly.
3. Piping
 - (1) Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to clean inside the pipe.
 - (2) When screwing in piping, be certain that debris like the sealing material do not get inside the piping.
 - (3) Set up so that air cannot accumulate inside the piping.
4. Cushion
 - (1) Readjust using the cushion needle.
 - (2) Do not operate with the cushion needle in a fully closed condition.
 - (3) Do not overly loosen the cushion needle.
5. Air release
 - (1) Operate after loosen the air release valve and completely releasing any internal air.
 - (2) When adjusting the air release, do not excessively loosen the plug.
6. Maintenance

Before machinery is removed, first ensure that there are measures in place to prevent the fall or sudden, erratic movement of driven objects and equipment. Then, cut off the air supply and electric power, and reduce the pressure in the system to zero.

Precautions for mounting direction

For the FA or FB mounting type, mount as shown in the figure below depending on the load direction.

Related equipment

Pneumatic Booster

Rush Booster

Operates on pneumatic pressure and converts it into hydraulic pressure several times to tens of times that of pneumatic pressure.

Fast feed with hydraulic pressure equivalent to pneumatic pressure, high thrust feed with increased high hydraulic pressure

“Pneumatic Booster”

High thrust feed only with boosted high oil pressure

“Rush Booster”
