

Stainless Steel Reservoir Tanks

Reduce a vacuum pressure fluctuation and pulsation

PISCO

CE

Air Tank

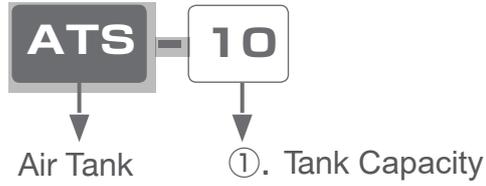

- Reducing the air and vacuum pressure fluctuations and pulsations.
- Tank capacity is selectable from 6 variations.

Tank capacity	0.42 qt.	0.79 qt.	0.53 gal.	1.32 gal.	2.64 gal.	5.28 gal.
(Liter)	0.4ℓ	0.75ℓ	2ℓ	5ℓ	10ℓ	20ℓ

- The tank is made of stainless steel.
Tank capacity 0.1 ~ 2.6 gallons (0.4 ~ 10ℓ) : SUS304 equivalent.
5.3 gallons (20ℓ) : SUS321 equivalent.
- Environment-friendly products.
Corresponding to RoHS directive.

Air Tank

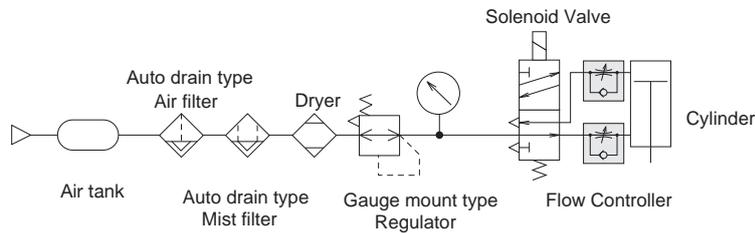

Model Designation (Example)

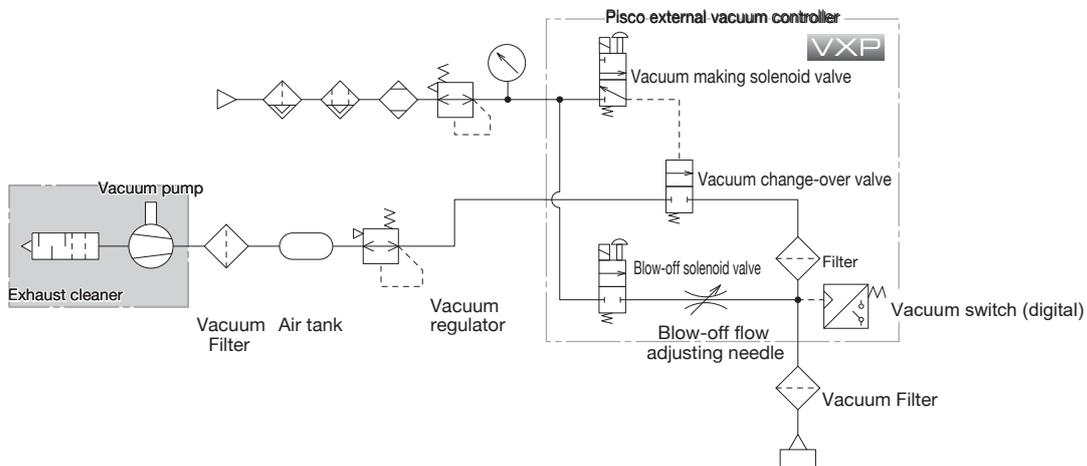

①. Tank Capacity

Code	0.4	0.75	2	5	10	20
Capacity (gallons)	0.11	0.2	0.53	1.32	2.64	5.28
Capacity (ℓ)	0.4	0.75	2	5	10	20

Example connecting to a compressed air system

Example connecting to a vacuum pump system

Specification

Type	ATS-0.4	ATS-0.75	ATS-2	ATS-5	ATS-10	ATS-20
Material	SUS304 equivalent					SUS321 equivalent
Port size	Connection port		G1/4	G1/2	G1	
	Drain port		—		G3/8	
Tank capacity (ℓ)	0.42 qt. (0.4)	0.79 qt. (0.75)	0.53 gal. (2)	1.32 gal. (5)	2.64 gal. (10)	5.28 gal. (20)
Fluid medium	Compressed air (vacuum) or nitrogen					
Operating pressure range (MPa)	-29.8 inHg to 145psi (-0.103~0.99)					
Mounting orientation	—			Drain port faces downward		
Temp. range (※1)	Environment [°C]		14 ~ 212°F [-10~100]			
	Fluid [°C]		14 ~ 212°F [-10~100]			
Weight [kg] (※2)	1.19 lbs. [0.54]	1.63 lbs. [0.74]	3.70 lbs. [1.68]	7.89 lbs. [3.58]	14.24 lbs. [6.46]	22.5 lbs. [10.21]

※1. The temperature range is for tank itself without fitting.

※2. The Weight is for tank itself without plug and fitting.

Detailed Safety Instruction

⚠ Warnings

1. Pressure and fluid medium
 - Using the tank exceeding the operating pressure range causes damage to it. Take a preventive measure not to exceed the range using a pressure sensor or other devices.
 - Do not use a fluid medium other than the specification, otherwise it may cause deterioration, damage, and other problems of the tank.
2. Safety and inspection
 - Confirm zero pressure inside the system and stop the supplying air before carrying out inspection or maintenance.
 - Unexpected accident may occur by an external damage or internal corrosion by drain. Periodically check outer breakage or damage and the internal corrosion status, or thickness reducing condition by using a thickness meter.
 - When drain accumulates in the tank, it causes internal corrosion or outflow of the drain into pipe. Set the drain discharging schedule according to the operational condition, and discharge the drain periodically.
3. Installation and operation
 - Applying a load on a tank such as stretch, torsion, or bend, or giving excessive impact on the tank, or dropping of the tank shall be avoided, otherwise it may cause damage to the tank.

⚠ Cautions

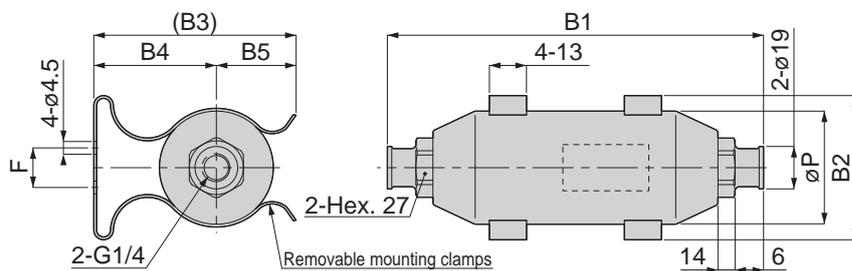

1. Installation and operation
 - When using the tank in a clean environment, install a suitable filter for the operation between the tank and other pneumatic equipment.
 - Do not install the tank on a place of moving or having vibrations.
 - Be sure to install the product firmly with all through-holes at the welded retainer brackets or on the mounting clamps. (ATS-0.4 and -0.75 are installed by the mounting clamps.)
 - Depending on the types of the connecting fittings to the tank, they may interfere with the floor for the tank with 5 liters or more capacity. Install the tank so that the fittings are free.
