Characteristics of VFU type (union type)

● VFU2, 3 type

Easy installing in-line type. Pipe resistance is small and stable.

● VFU0, 1 type

Smallest footprint. Best suitable for applications where a high-cycle vacuum system is required.

As shown in the drawings below, VFU0, 1 types can be installed in narrow spaces.

2 options (for VFU1 type only) of element size (Filter area)

Selectable from 2 types, depending on dust size or replacement timing of the element.

For IN and OUT side connection, Push-in fitting and female thread are selectable.

Piping with various items, especially with a Minimal fitting, can save installation space.

Example of connection with a Minimal fitting. ▶

● -S3 spec. (Metal option)

No copper-based metallic materials used in flow paths.

Seal rubber material is HNBR or FKM, both of which have good ozone resistance.

Characteristics of VFB (large capacity: union type) and VFR (large capacity : bowl capacity 60m² type)

• VFB (Union) type

Easy detachment of dust case prevents scattering of dust.

To be used in the vacuum circuit, between vacuum generator and vacuum pad, or between vacuum pump and matched device.

• VFR (bowl capacity 60m²) type

Removing dust and water droplets sucked in by vacuum generator or vacuum pump by cyclone effect and element.

Large dust case reduces maintenance frequency.

Filter for vacuum generator exhaust port is also available.

Characteristics of VFL (large capacity: bowl capacity 90m²) type

Flow rate: 360ℓ/min [ANR]. Large capacity ensures large flow rate.

Four types of filtration accuracy can be selected according to applications.

Filtration accuracy: 1μm, 5μm, 10μm, 200μm

Various types of connections.

Taper pipe female thread, Parallel pipe female thread and Push-in fitting are available.

Characteristics of VFJ (Plug-in type)

Suitable for vacuum generator stand-alone type without built-in filter.

Plug-in type with filter. PP material achieves a low price.

Built-in filter inside.

Piping example

Union type (VFU), Large capacity union type (VFB)

Place a vacuum filter between vacuum generator and vacuum pad, or between vacuum pump and matched device to filter out dust and prevent damage to vacuum generator or vacuum pump.

Large capacity type (bowl capacity 60m³) Open to air exhaust (VFR)

Open to air exhaust "VFR" is to be installed on the exhaust side of Vacuum Generator VRL for transferring tiny work-pieces like particles and powder.

* Contact us for particle transferring application.

Large capacity type (bowl capacity 90m³) (VFL)

Large capacity vacuum filter, by being installed close to the large flow vacuum generator or the vacuum pump, would remove dust particles and prevent their mechanical failure.
